

# Stainless UK

## Sustainability Policy

Stainless UK Ltd is committed to the continual promotion of sustainability through all areas of the company's influence.

Stainless UK Ltd will endeavor to:

1. Minimise the impact on sustainability of all our activities.
2. Integrate sustainability into all our business decisions.
3. Ensure that all our staff are aware of our sustainability policy and are committed to implementing and improving it.
4. Comply with all applicable legislation, regulations, and codes of practice.
5. Source all energy from renewable energy suppliers.

To achieve these principles, the following actions are taken and encouraged.

### **Waste Materials**

Stainless steel is 100% recyclable with around 70% of new stainless steel coming from recycled product. Stainless UK disposes of its scrap stainless steel through approved scrap metal dealers. Waste is split between General Waste and Dry Mixed Recycling Waste. Each type of waste has its own designated container and is removed by an approved waste management company.

### **Resources**

Stainless UK seeks ways to minimise the consumption of electricity and water where possible by, for example, fitting motion sensors for some office lighting, turning off computers and timed cut offs on heaters.

### **Travel and Meetings**

Stainless UK looks for ways to reduce its carbon footprint by for example only making necessary business trips and encouraging employees to consider car sharing or the use of public transport.
